

Figure S1. The top five types of each SSR repeat motif and their frequencies in *C. moschata*, *C. maxima*, and *C. pepo*, respectively. Dinucleotides (A), trinucleotides (B), tetranucleotides (C), pentanucleotides (D), hexanucleotides (E), heptanucleotides (F), and octanucleotides (G).

Figure S2. The optimal K-values analysis by using Structure Harvester.
