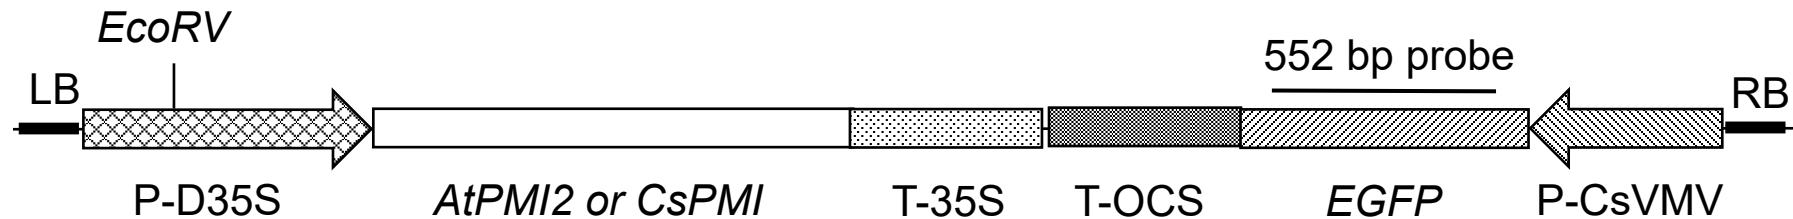

Figure S1. The expression cassettes of plasmid 2300*AtPMI2*, 2300*CsPMI2* or 2300*PMI1*. The diagram depicts the left border (LB) T-DNA; P-D35S, the duplex cauliflower mosaic virus 35S promoter; *AtPMI2* or *CsPMI*, one of the following genes: *AtPMI2*, the coding region of *Arabidopsis thaliana phosphomannose isomerase gene* (accession: NM_105377), *CsPMI2*, the coding region of *Citrus sinensis phosphomannose isomerase 1 gene* (accession: XM_006482179) or *CsPMI1*, the coding region of *Citrus sinensis phosphomannose isomerase 1-like gene* (accession: XM_006469025); T-Nos, the nopaline synthase gene terminator; T-OCS, the octopine synthase gene terminator; *EGFP*, enhanced green fluorescence protein gene; P- CsVMV, the cassava vein mosaic virus promoter; RB, T-DNA right border; *EcoRV*, restriction site. The 552 bp probe in the *EGFP* coding region was used for Southern blot analysis.
