

Supplementary Material

Disturbance of the conformation of DNA hairpin containing the 5-GT-3' binding site caused by Zn(II)bleomycin-A5 studied through NMR spectroscopy.

Kyle L. Covington and Teresa Lehmann *

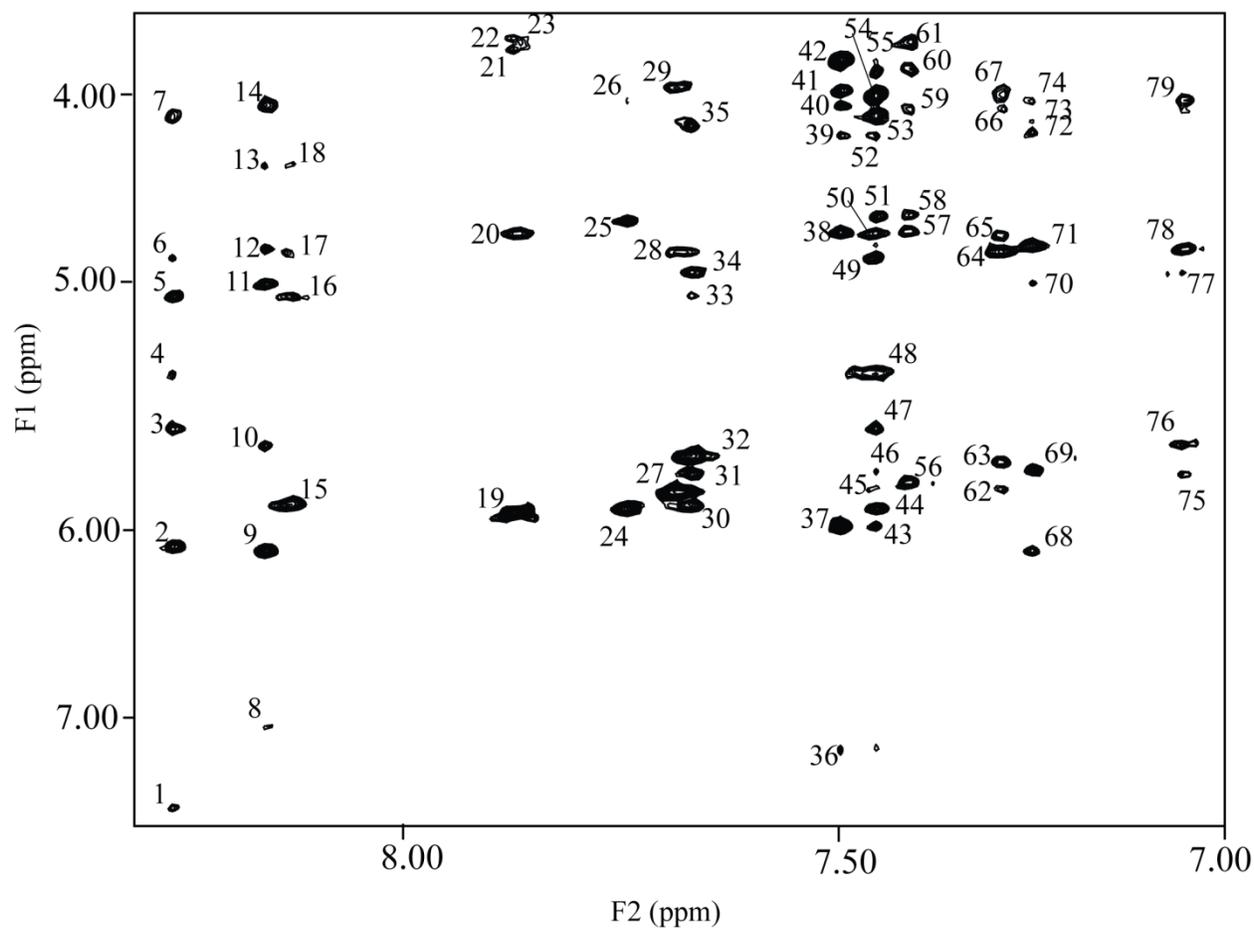

Figure S1. NOESY spectrum of free OL₂ in D₂O collected at 25 °C. This region displays the NOE connectivities between the base protons and the sugar region of the DNA backbone of free OL₂. Assignments are provided in Table S2.

Table S1

NOESY connectivities displayed by OL₂ in H₂O at 5 °C. Missing NOE (*) and new NOE (+) connections upon Zn(II)BLM binding.

^aAsterisks (*) indicate that the specific NOE is missing upon complexation with the specified Zn(II)BLM,

^bPlus (+) indicates that the specific NOE connection is found upon complexation with the specified Zn(II)BLM, ^cPrime (') indicates that the NOE is not a native NOE connection for free OL₂.

^{a,b}Blue and green colored labels indicate base-sugar and base-base NOEs, respectively. ^cRed colored labels indicated that the NOE is only detected when the specified Zn(II)BLM is bound. ^dAsterisks (*) indicate that the specific NOE is missing upon complexation with the specified Zn(II)BLM, ^ePlus (+) indicates that the specific NOE connection is found upon complexation with the specified Zn(II)BLM. The color coding of the NOE assignments corresponds to the color coding for Figures 9 and 11.
