Table S4. Coding framework used for the studies included in the scoping review.

Eligibility

Studies were included if they defined and categorised health care waste and were coded based on the coding categories below.

Sources of literature

- Dissertation
- Journal

Information used to code

- All full-text articles

Country focus

- High income countries
- Low- and middle-income countries

Study design

- | | | | | |
|--------------------------------------------|--------------------------------------------|------------------------------------------------|-------------------------------------------------------|---------------------------------------|
| <input type="checkbox"/> Case study | <input type="checkbox"/> Commentary | <input type="checkbox"/> Cross-sectional study | <input type="checkbox"/> Document analysis experiment | |

Terminologies used to describe health care waste

- Biomedical waste
- Clinical waste
- Health care waste
- Medical waste
- Hospital waste

Categories of health care waste

- Non-hazardous
- Hazardous

Topics discussed by the studies

- Health care waste management practices
- Knowledge and attitudes of health care staff
- Policies on health care waste management
- Segregation and quantification of health care waste
- Health care waste treatment and disposal
- Risks associated with health care waste management
- Models for health care waste management
