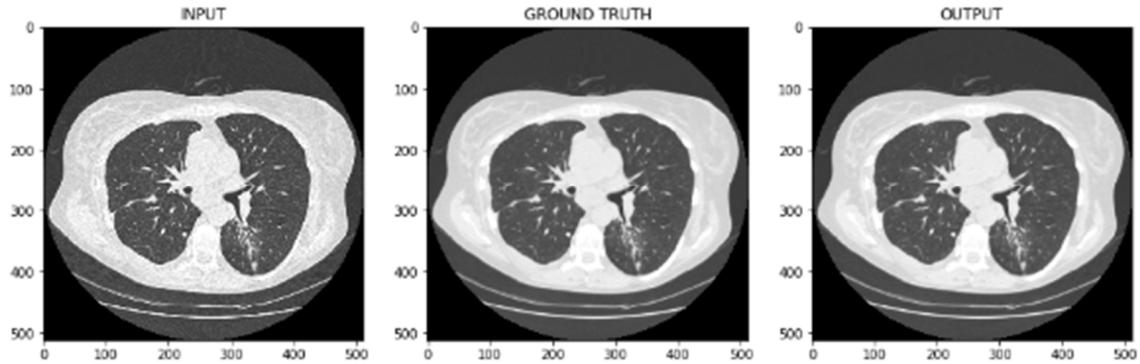

Figure S1. CNN kernel conversion example. An example of kernel conversion using the developed CNN network from sharp kernel (Input) to smooth kernel (Ground Truth). CT images of input (sharp), ground truth (smooth), and output (sharp \rightarrow conv_smooth) are shown, respectively.

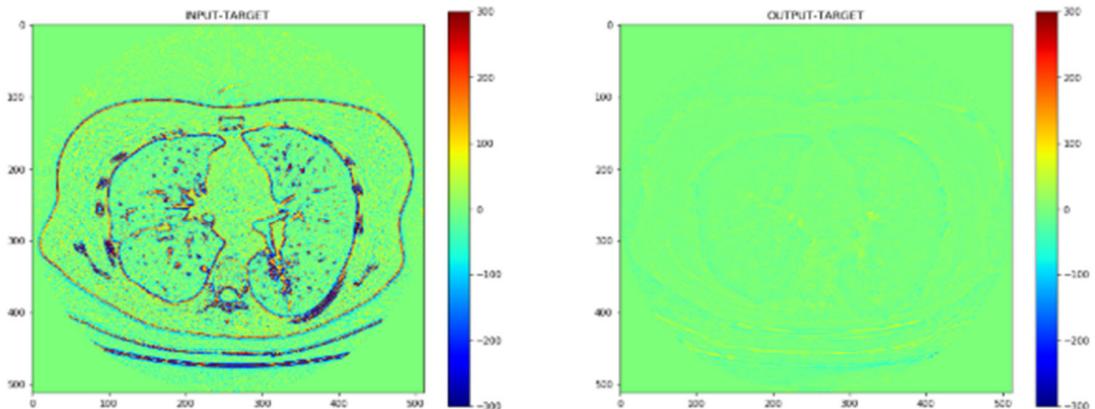

Figure S2. Difference maps. The difference maps are shown to show how much differences there are in the CT images between the input (sharp) and the target (smooth or ground truth) and between the output (conv_smo) and the target (smooth or ground truth). There was a 99% decrease in RMSE after CNN kernel conversion.

Table S1. CT image scanner parameters for the development cohort.

Scanning parameters	GE LightSpeed 16 (n = 28)	GE VCT (n = 4)
Tube voltage	120 kVp	120 kVp
Tube current	299–441 mA	298–351 mA
Collimator configuration	16 x 1.25 mm	64 x 0.63 mm
