

Supplementary Materials

Table S1. LefSe analysis results showing differentially abundant (log transformed LDA score > 2.5, $p < 0.05$) metabolic pathways (inferred by PICRUSt2) in intestinal content ($n = 4$) and intestinal wall ($n = 4$). p -values were not adjusted.

Pathway	Type	LDA_score_log10	p-value
adenine_and_adenosine_salvage_III	Intestinal_content	-3.251	0.043
purine_ribonucleosides_degradation	Intestinal_content	-3.223	0.021
superpathway_of_purine_deoxyribonucleosides_degradation	Intestinal_content	-3.193	0.021
acetylene_degradation	Intestinal_content	-3.135	0.021
superpathway_of_N-acetylneuraminate_degradation	Intestinal_content	-3.085	0.021
superpathway_of_pyrimidine_deoxyribonucleosides_degradation	Intestinal_content	-3.056	0.021
superpathway_of_N-acetylglucosamine,_N-acetylmannosamine_and_N-acetylneuraminate_degradation	Intestinal_content	-3.040	0.021
superpathway_of_adenosine_nucleotides_de_novo_biosynthesis_I	Intestinal_content	-3.006	0.021
pyrimidine_deoxyribonucleosides_salvage	Intestinal_content	-2.938	0.043
chitin_derivatives_degradation	Intestinal_content	-2.920	0.021
starch_degradation_V	Intestinal_content	-2.908	0.043
thiazole_biosynthesis_II_(Bacillus)	Intestinal_content	-2.827	0.043
6-hydroxymethyl-dihydropterin_diphosphate_biosynthesis_III_(Chlamydia)	Intestinal_content	-2.818	0.021
adenosine_ribonucleotides_de_novo_biosynthesis	Intestinal_content	-2.720	0.021
superpathway_of_polyamine_biosynthesis_III	Intestinal_content	-2.650	0.043
superpathway_of_L-tyrosine_biosynthesis	Intestinal_content	-2.578	0.021
D-fructuronate_degradation	Intestinal_content	-2.557	0.021
flavin_biosynthesis_I_(bacteria_and_plants)	Intestinal_content	-2.553	0.021
methylphosphonate_degradation_I	Intestinal_wall	2.527	0.021
