<sup>a</sup>: Numbers correspond to the nucleotides separating adjacent genes, with a negative number indicating an overlap. Characteristics of the mitochondrial genomes of *S. dabryi* 1 and 2 are the same, while *S. dabryi* 3 and 4 are the same. The same information of mitogenomes of *S. punctatus*, *S. dabryi* 1 and 2, and *S. dabryi* 3 and 4 was displayed only once (e.g., position, size, etc.), and their different information was spaced by '/'. H represents the heavy strand; L represents the light strand.

**Table S3.** Likelihood ratio tests and parameter estimates under branch model for genes between *Gobiobotia* subgroup and *Pseudogobio* subgroup.
