

## PRISMA 2009 Flow Diagram

Figure S1. Flow diagram of study selection process

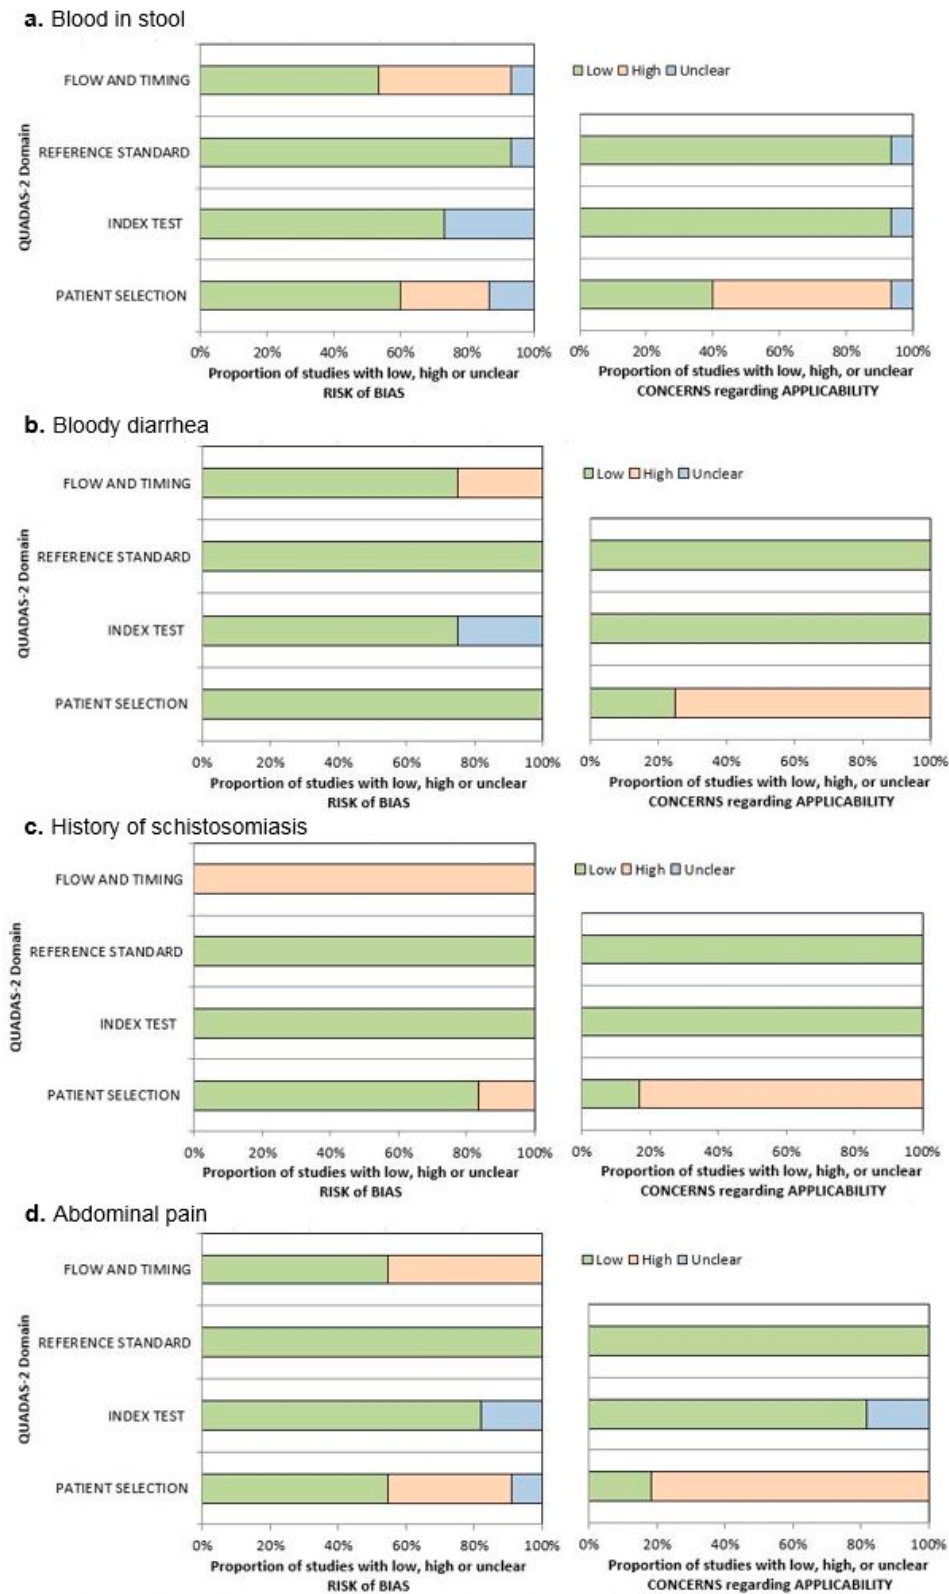

**Figure S2.** Deeks funnel plot asymmetry test for publication bias for *S. haematobium* diagnostic questions: (a) blood in urine; (b) pain during urination; and (c) history of schistosomiasis.

**Figure S3.** Deeks funnel plot asymmetry test for publication bias for *S. mansoni* diagnostic questions: (a) abdominal pain; (b) history of schistosomiasis; and (c) blood in stool; and (d) bloody diarrhea.

**Figure S4.** Quality assessment results for diagnostic questions used in *S. haematobium* meta-analysis: (a) blood in urine; (b) pain during urination; and (c) history of schistosomiasis.

**Figure S5.** Quality assessment results for diagnostic questions used in *S. mansoni* meta-analysis: (a) blood in stool; (b) bloody diarrhea; (c) history of schistosomiasis; and (d) abdominal pain.

**Figure S6.** Sensitivity forest plot, Specificity forest plot, and SROC plot for blood in urine question (*S. haematobium*): **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S7.** Sensitivity forest plot, Specificity forest plot, and SROC plot for history of schistosomiasis question (*S. haematobium*): **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S8.** Sensitivity forest plot, Specificity forest plot, and SROC plot for blood in stool question (*S. mansoni*): **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S9.** Sensitivity forest plot, Specificity forest plot, and SROC plot for bloody diarrhea question (*S. mansoni*): **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S10.** Sensitivity forest plot, Specificity forest plot, and SROC plot for abdominal pain question (*S. mansoni*): **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S11.** Sensitivity forest plot, Specificity forest plot, and SROC plot for history of schistosomiasis (*S. mansoni*). **(a)** Sensitivity forest plot; **(b)** Specificity forest plot; and **(c)** SROC curve with summary sensitivity and false positive rate (1-specificity) (circle) and the 95% confidence region (ellipse). Each triangle represents the summary sensitivity and false positive rate from one study.

**Figure S12.** Proportion of students classified as *S. haematobium*- (red) or *S. mansoni*- (blue) positive in this study using different LR+ threshold values. The proportion classified as infected is shown to decrease as the LR+ threshold value is raised because of reductions in false positives. A LR+ of 3.5 was selected as the threshold value in this study to balance the need for obtaining adequate numbers of positive cases while keeping the false positive rate sufficiently low.

**Figure S13.** Distribution of individual wealth scores among 1704 Tanzanian schoolchildren with schistosomiasis status indicated by color: positive (blue) and negative (red).

**Table S1.** Characteristics of studies with data for the diagnostic questions used in the *S. haematobium* meta-analyses

| Diagnostic Question        | First Author | Year of Publication | Country    | Sample size | Prevalence | Ages           | TP   | FP   | FN   | TN   |
|----------------------------|--------------|---------------------|------------|-------------|------------|----------------|------|------|------|------|
| Blood in urine             | Warren       | 1979                | Kenya      | 390         | 83.6%      | Schoolchildren | 239  | 14   | 87   | 50   |
| Blood in urine             | Abdel-Wahab  | 1992                | Egypt      | 422         | 33.6%      | Schoolchildren | 62   | 45   | 80   | 235  |
| Blood in urine             | Ekanem       | 1995                | Nigeria    | 462         | 38.3%      | Schoolchildren | 107  | 30   | 70   | 255  |
| Blood in urine             | Mtasiwa      | 1996                | Tanzania   | 404         | 67.6%      | Schoolchildren | 111  | 13   | 162  | 118  |
| Blood in urine             | Onayade      | 1996                | Nigeria    | 105         | 88.6%      | Schoolchildren | 73   | 1    | 20   | 11   |
| Blood in urine             | Mafe         | 1997                | Nigeria    | 1024        | 57.6%      | All            | 259  | 49   | 331  | 385  |
| Blood in urine             | Traore       | 1998                | Mali       | 1041        | 55.2%      | All            | 252  | 59   | 323  | 407  |
| Blood in urine             | Traquinho    | 1998                | Mozambique | 994         | 84.4%      | Schoolchildren | 528  | 68   | 311  | 87   |
| Blood in urine             | Guyatt       | 1999                | Tanzania   | 3928        | 58.1%      | Schoolchildren | 1175 | 342  | 1107 | 1304 |
| Blood in urine             | Takougang    | 2004                | Cameroon   | 871         | 36.3%      | Schoolchildren | 138  | 94   | 178  | 461  |
| Blood in urine             | Bowie        | 2004                | Malawi     | 1565        | 8.6%       | Schoolchildren | 90   | 289  | 44   | 1142 |
| Blood in urine             | Fatiregun    | 2005                | Nigeria    | 592         | 12.2%      | Schoolchildren | 30   | 36   | 42   | 484  |
| Blood in urine             | French       | 2007                | Tanzania   | 1976        | 13.2%      | Schoolchildren | 45   | 42   | 215  | 1674 |
