Dr. Konstantinos Antoniadis
Department of International and European Studies, University of Macedonia, Thessaloniki 546 36, Greece

Deadline for manuscript submissions:
28 February 2025

Message from the Guest Editors

The Issue will examine the applications of digital government in diverse sectors, including education, health, tourism, services, and business, showcasing its potential impact across various industries. It will emphasize the involvement of relevant stakeholder groups and categorize the interactions between these groups and the government into different dimensions such as government-to-government, government-to-business, government-to-non-profit, government-to-citizen, government-to-visitor, and government-to-employee. Key factors for successful digital government services, identified as efficiencies, effectiveness, transparency, security, and trust, will be explored. The Issue will also discuss administrative reengineering as a strategy to optimize government operations through digitalization.

This Special Issue welcomes the submission of case studies, comparative studies, research papers, and review papers to contribute to the exploration and understanding of digital government.
