Message from the Guest Editor

The economic and health losses caused by the growth of pathogenic and saprophytic microorganisms in agricultural commodities are enormous all over the world. We are constantly looking for new ways to protect food against microbial growth. Unfortunately, some of them do not sufficiently protect against the growth of microorganisms, and their use is not acceptable to the increasing number of aware. Additionally, the use of packaging made of traditional polymers (PVC, PET etc.) generates large amounts of environmentally hazardous waste. The solution to this problem may be the use of composite edible packaging. The latest generation of edible coatings, apart from the function of separating the product from the natural environment, also have antimicrobial properties, thanks to the supplementation of the film matrix with substances protecting against the growth of microorganisms. This is a response to the demands of consumers who pay increasing attention to the content of preservatives in food.

This Special Issue will attempt to present various ways to extend the shelf life of agricultural products through both modified traditional and modern methods.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
