Message from the Guest Editor

Agricultural products like fruit, vegetable and cereal, are reckoned to be one of the most crucial sources of certain phytonutrients necessary for humans, such as vitamins, dietary fibers, and minerals. However, agricultural products are prone to quality deterioration during storage at ambient temperature. Currently, the annual post-harvest loss rate of agricultural products can reach up to 20–30%. Owing to their perishable nature, the development of processing and preservation technologies for agricultural products is an important research topic closely associated with the national economy and people's livelihood that has attracted ever-increasing attention.

In view of the prominent issues of high-energy-consuming, high-cost, serious pollution, and low-quality properties in agricultural products manufacturing, our journal mainly focuses on research articles on novel techniques and the underlying mechanisms of the processing, preservation, and quality control of agricultural products, so as to promote the upgrading and updating of the agricultural products industry.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
