Message from the Guest Editor

Dear Colleagues,

Extreme weather events and climate variability have raised interest in practices that could be adopted to help address projected climate change. For agricultural lands, climate-smart practices have received increasing attention as avenues via which greenhouse gas (GHG) emissions may be reduced and soil organic matter content may be increased as a means of sequestering carbon. Conservation tillage, buffer strips, managed rotational grazing and judicious nutrient management reduce GHG emissions, and are consequently deemed climate-smart. This Special Issue covers the economics of climate-smart practices in a bid to provide an outlet for publications that will advance our knowledge of the economic implications of climate-smart practice implementation.

We welcome contributions that are purely economic analyses, as well as interdisciplinary studies within the scope of the economic implications of climate-smart or conservation practice implementation. Original works and reviews are both welcome, as long as they contribute to our understanding of the economic underpinnings of agriculture and the related environmental and ecological issues.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (Plant Science)
