Message from the Guest Editor

Dear Colleagues,

Global climate change is increasingly affecting agricultural and livestock production, with an overwhelmingly negative effect on animal health and welfare as well as the whole farm systems. The livestock sector must urgently work towards more efficient and sustainable productivity and meet higher standards of animal health and welfare. Agro-livestock sector practices should consider the need for continuous adaptation (resilience) to an ever-changing environment that offers solutions to buffer climate extremes, changing nutrient availability, seasonal forage availability, disease epidemiology, and other new challenges in an environment of heterogeneous conditions. This Special Issue aims to collect the most up-to-date scientific knowledge on the impact of climate change on animal agriculture, with a focus on the specificities of agricultural systems, adaptation strategies of livestock systems that can be implemented to reduce this impact, the impacts of mitigation strategies on animal welfare, as well as identifying opportunities to investigate new adaptation and mitigation strategies.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
