Message from the Guest Editor

Fresh fruits and vegetables are an integral part of our diet. Unfortunately, they spoil quickly. To make them more accessible, they need to be processed all kinds of other measures. Different methods of processing fruits and vegetables do not cause them to lose their nutritional properties and acquire new sensory qualities. Thus, various processing methods are used to enhance the edibility and palatability of fruits and vegetables and also to prolong their shelf life.

Articles that may be of interest for this Special Issue deal with modern fruit and vegetable processing technologies in addition to their impact on the nutritional and sensory properties of the resulting products. Potential topics include, but are not limited to, the following:

- Comparison and description of fruit and vegetable processing methods.
- Comparison and description of the sensory properties of fresh fruits and vegetables with processed products.
- Changing the content of bioactive or essential compounds in fruits and vegetables as a result of processing.
- Impact of fruit and vegetable processing on human health.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
