### **Message from the Guest Editors**

"Civilisation depends for continuance on the seed saved each year for planting the next." This evergreen statement of J.F. Cox focuses on the importance of seed propagation, and on the value of crop seed. The Special Issue is intended to cover a broad spectrum within seed production. Unlike conventional seed propagation studies, this volume would highlight problem areas of seed production. The first of them is seed dormancy that is rather diverse according to crop species as well as management techniques. The other field of the present volume is dedicated to viability including all genetic and agronomic factors of germination and vigour. A novel field of seed science is represented by proteomics and other biochemical characteristics that may influence the success of seed production and propagation. Finally abiotic and biotic factors of seed storage and postharvest manipulations are to be discussed.

Deadline for manuscript  
submissions:

**closed (20 August 2023)**

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
