Deadline for manuscript  
submissions:

**25 July 2024**

### Message from the Guest Editors

Feeding strategies play a pivotal role in determining the nutritional composition of animal products. The unique digestive systems of ruminants can efficiently convert fibrous plant material into high-quality protein sources. Monogastric animals necessitate diets that are precisely formulated to meet their nutrient needs. This influences the growth rate, feed efficiency, and nutrient content of their final products.

This Special Issue aims to bring together research studies that investigate different feeding strategies, offering insights into optimizing animal diets to improve animal health and production, while enhancing the nutritional value and quality characteristics of animal-derived products.

This Special Issue is dedicated to being a platform for interdisciplinary studies on animal nutrition, physiology, chemistry, raising technologies, feeding strategies, and product quality. The articles will cover a wide range of topics related to feed quality, and the feed's effect on production, animals' health, and product quality.

an Open Access Journal by MDPI

## Message from the Editor-in-Chief

*Agriculture* (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
