Message from the Guest Editors

The indiscriminate use of synthetic chemical pesticides is frequently associated with environmental and toxicological problems, resulting in an increased interest and enormous research efforts focused on new environmentally benign solutions. In this context, botanicals and plant-derived pesticides, such as essential oils, have been advocated for as sustainable alternatives in pest management strategies. However, despite their proven biological activities and the overwhelming research efforts, the large-scale commercialization and use of plant-based pesticides is still lacking. This Special Issue aims to present recent advances in research on botanical pesticides, including the identification and chemical characterization of pesticidal plants and their active molecules, evaluation of their bioactivities against pests and disease vectors, selectivity to non-target organisms, molecular and physiological mechanisms of action as well as nanotechnology-based new solutions for botanicals' application in integrated pest management.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
