Message from the Guest Editors

Modern agriculture has caused global ecological and environmental problems due to the consumption of a large amount of resources and energy. To meet these challenges of modern agriculture, we must rethink the theories, policies, models, and technologies of modern agricultural development. This rethink includes new concepts and methods of agriculture. Although research on and practices of sustainable agriculture have achieved remarkable results over the past 40 years, the development of the social economy and the current challenges of world agriculture necessitate further research to improve the future of agriculture.

This Special Issue focuses on theories, methods, policies, and practices that can contribute to sustainable agricultural development, including lessons learned and approaches to innovation. Interdisciplinary quality studies are highly welcome. The fields relevant to this Special Issue include, but are not limited to, agriculture, management, economics, ecology, environmental science, engineering design, calculations, and modeling. Both original research articles and reviews are acceptable.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
