Message from the Guest Editors

Current studies about global food and agriculture show that world production may need to be increased by 60%–110% before 2050 to avoid food shortage. Along with the demand for increased production, there is also a requirement to protect the environment, mainly by reducing the number of pesticides, and making better use of agricultural inputs and resources: land, water, fertilizers, and energy. Classic improvement remains the most widely used method for the production of improved and stress-resistant crop plants. However, it has become clear that this approach by itself will not be sufficient to provide long-term solutions due to its many limitations. The use of natural alternatives, such as biostimulants and beneficial microorganisms, has become one of the most promising strategies to improve food production, reducing the amount of chemical inputs.

This Special Issue is intended to bring together a collection of research papers on the applied use natural bio stimulants and beneficial microorganisms in growth promotion and plant protection including creative strategies to grow more food with fewer resources and less problems associated with the use of chemicals fertilizers.

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
