Message from the Guest Editor

In recent years, poultry farming has been one of the fastest developing branches of animal production. The main drive for developing broiler chicken production is the growing demand for poultry meat, which is mainly due to its dietetic values and great number of culinary applications, supported by its outstanding physical and chemical properties and sensory value. Those expectations are being met thanks to the appropriate choice of feed raw materials in poultry diets. It is necessary to promote research and the dissemination of results in the field of the performance, slaughter value and product quality of poultry which are modified due to dietary interventions.

This Special Issue focuses on the role that dietary interventions play in poultry production (broiler chickens, turkeys, laying hens, etc.). Original research articles and reviews are accepted.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agriculture (ISSN 2077-0472) is an international, crossdisciplinary and scholarly open access journal on the science and technology of crop and animal production, and management of the natural resource base for agricultural production. *Agriculture* is published in an open access format – research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the public have unlimited and free access to the content as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q2 (*Plant Science*)
