Message from the Guest Editors

Dear Colleagues,

Grapevine (*Vitis vinifera* L.) is one of the main crops worldwide. It has been cultivated since ancient times and its susceptibility to many different pests and diseases is well known. Potential disease-producing agents are many and very diverse, including viruses, fungi, nematodes, bacteria, and phytoplasmas.

Traditionally, integrated control methods (IPM) have been used, by combining the effects of chemical treatments, cultural management techniques, tolerant cultivars, and biological control. Although much research has been conducted on grapevine diseases in the past, the arrival of new knowledge, new methods, and new techniques (higher resolution molecular techniques, massive genome sequencing, image analysis, sensors, risk assessment models, etc.) opens the door to innovative control strategies.

Research articles, review articles, as well as short communications are invited. The aim of this Special Issue is to share new knowledge and scientific-based methods focused on any aspect related to the understanding and optimization of grapevine disease control.

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
