Message from the Guest Editor

Dear Colleagues,

Powdery mildew causes agriculturally significant diseases on a wide range of crops. Causal agents are biotrophic Erysiphales fungi, with very efficient mechanisms of spread. A battery of control strategies have been implemented in many crops, with chemicals and resistance genes often available, but also often quickly overcome by rapid evolution of powdery mildew populations.

In this Special Issue, research articles, reviews, and opinion papers addressing powdery mildew integrated management in crops, from epidemiology, cultural, chemical or biological control, and disease resistance perspectives are all welcome.

Prof. Dr. Diego Rubiales

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
