Germplasm Enhancement and
Specialty Agriculture, Wuhan
Botanical Garden, Chinese
Academy of Sciences, Wuhan
430074, China

Deadline for manuscript
submissions:

25 June 2024

Message from the Guest Editors

The growth and development of plants are limited by abiotic and biotic stresses. Solutions to improve plant tolerance and minimize the effects of abiotic stresses have been actively sought.

This Special Issue aims to address the mechanisms of plant. We highlight that an approach based on different integrated systems can improve plant adaptation and productivity in a sustainable way using omics approaches.

We welcome the submission of original research articles and review related to, but not limited to, the following topics:

Studies on plant–environment interactions through omics technologies;

Application of natural small molecules of plant origin with biological activity in plant tolerance improvement;

Using cultivation measures, fertilizers, and other methods to improve environmental stress resistance and agronomic traits;

Revealing molecular mechanisms and regulatory network under various environmental stresses in plants and improving stress tolerance through genetic engineering;

Identifying key regulatory genes of important agronomic traits and improving molecular breeding methods.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
