### **Message from the Collection Editors**

Dear Colleagues,

Hydroponics include any system of growing plants without the use of soil as a rooting medium. One of the major advantages of hydroponics, besides being independent of the soil and hence of all problems related to it, is the complete control of nutrition via the nutrient solution.

This Special Issue focuses on different variables associated with nutritional management of hydroponically grown vegetables aiming to increase yield and product quality:

1. Macronutrient Management for Enhancing Nutritional Quality of Hydroponically Grown Vegetables
2. Biofortification of Vegetables with Essential and Beneficial Micronutrients
3. Salinity Management in Closed Hydroponic Systems
4. Decision Support Systems
5. Optimization of Nutrient Solutions According to Crop Needs and Nutrient Uptake
6. Recycling–Reusing–Saving Input Strategies
7. Organic Hydroponics
8. PGPRs and Biostimulants in Soilless Culture
9. (A)biotic Stresses Affecting Physiology and Product Quality of Hydroponically Grown Vegetables

## **Message from the Editor-in-Chief**

*Agronomy* draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

## **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
