Message from the Guest Editors

Dear Colleagues,

The bio-economy consists of the production and transformation of biomass, which is used to provide food, feed, materials, energy, and connected services. Topics related to climate-friendly and sustainable technological solutions and development processes is the focus of scientific research. The evaluation of national and regional bio-economy plans and the presentation of models play a key role in the green innovation processes of the sectors. The presentation, scientific analysis, and presentation of adaptation possibilities of new circular technological solutions related to the production of food and other biomass products are very important for the development of sustainable system solutions. We can envisage replacing fossil-based materials and energy with bio-based solutions in the future, potentially reducing environmental pressures while strengthening green innovation and creating new jobs. The focus areas of the Special Issue are circular biomass production, circular bio-based manufacturing, and bio-based services.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Agronomy draws together researchers from diverse areas of agricultural research with a common aim of enhancing agricultural productivity globally. The journal provides unlimited free access to all those interested in advancing agricultural science from both the research and general community. Papers are released immediately after acceptance through the internet. *Agronomy* is supported by our authors and their institutes through low article processing charges (APC) for accepted papers. We hope you will support the journal by becoming one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (*Agronomy*) / CiteScore - Q1 (*Agronomy and Crop Science*)
