Prof. Dr. Suodi Zhai

Department of Pharmacy
Administration and Clinical
Pharmacy, Peking University,
Beijing, China

Dr. Pengxiang Zhou

Department of Pharmacy, Peking
University Third Hospital;
Institute for Drug Evaluation,
Peking University Health Science
Center, Beijing, China

Deadline for manuscript
submissions:
closed (1 January 2023)

Message from the Guest Editors

In China, antibiotic use has been strictly managed in hospitals, considering how widely it is used, the expenditure, and the serious consequences of antimicrobial abuse. Additionally, the bacterial resistance surveillance system is relatively well established in China, providing antibacterial resistance data for guidance on the appropriateness of antibiotics. Nevertheless, with the increasing complexity of clinical infection, the rational use of antibiotics in China still needs further research and improvement.

This Special Issue will focus on the appropriateness of antibiotics in China and invite scholars to report the latest research and review results. This Special Issue also seeks manuscript submissions that further improve our understanding and experience of rational antibiotic use in China.

After the successful first volume, we are delighted to launch a second volume, in which we hope to bring together the new advances in this exciting topic.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1
(*General Pharmacology, Toxicology and Pharmaceutics*)
