submissions:

closed (30 June 2023)

Message from the Guest Editor

Dear Colleagues,

Pathogens colonize and reside in biofilms, where they live surrounded by a polymeric matrix that protects them from different physical, chemical and biological stresses. The colonization of biological tissues and non-living surfaces is classically the root of persistent and medical-device-related infections, and is too often the leading cause of the failure of antimicrobial therapies.

This Special Issue seeks review contributions on antibiofilm strategies. We kindly invite and encourage all research groups covering various antibiofilm strategies to contribute to this Special Issue of featured reviews.

Message from the Editor-in-Chief

There are very few fields that attract as much attention as scientific endeavor related to antibiotic discovery, use and preservation. The public, patients, scientists, clinicians, policy-makers, NGOs, governments, and supra-governmental organizations are all focusing intensively on it: all are concerned that we use our existing agents more effectively, and develop and evaluate new interventions in time to face emerging challenges for the benefit of present and future generations. We need every discipline to contribute and collaborate: molecular, microbiological, clinical, epidemiological, geographic, economic, social scientific and policy disciplines are all key. *Antibiotics* is a nimble, inclusive and rigorous indexed journal as an enabling platform for all who can contribute to solving the greatest broad concerns of the modern world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Pharmacology & Pharmacy*) / CiteScore - Q1
(*General Pharmacology, Toxicology and Pharmaceutics*)
