Deadline for manuscript
submissions:

closed (28 February 2021)

Message from the Guest Editors

Dear Colleagues,

Because of environmental policies and the need for viable alternatives to traditional chemicals and polymers, the use of renewable sources of plant origin, i.e., biomass, is believed to be the future of plastics.

Polymers from renewable resources represent an innovative solution to the problem of plastic pollution and, above all, to the consumption of mineral resources and the greenhouse effect. Bioplastics have attracted the interest of industries and consumers around the world over the last 20 years. At the same time, European and American legislative frameworks have changed in favor of bio-based products at the expense of petrochemicals. The bio-based products sector is considered a key-enabling technology by the EU, shifting the priority area for growth and finance.

Submissions on related topics are welcome, including the synthesis of biobased monomers, the synthesis and characterization of bioplastics, their copolymers, composites, and nanocomposites, as well as their applications. Special attention will be devoted to bioplastics that are also biodegradable and compostable.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
