do Sul, Porto Alegre 91501-970,
Brasil

Message from the Guest Editors

Deposits of clays may have complex origins. One deposit is not like another of the same material, but integrative genetic models can produce useful patterns for exploration purposes. Clays occur in many different geological environments: weathering crusts and soils, continental and marine sediments, volcanic deposits, geothermal fields, wallrock alteration produced by the intrusion of plutonic rocks and hydrothermal fluids, and very low-grade metamorphic rocks. Clay formation and evolution are distinctive events in the geological history of a basin. The source area, transport, depositional environment of clays, and transformation and diagenetic changes are fundamental for the analysis of sedimentary basins.

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Giulio Nicola Cerullo

Dipartimento di Fisica,
Politecnico di Milano, Piazza L.
da Vinci 32, 20133 Milano, Italy

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
