Message from the Guest Editor

Dear Colleagues,

Modern manufacturing systems are ever more developing as cyber–physical systems that are able to collect data from the surrounding physical environment and use it in order to make autonomous decisions using smart functionalities.

Such systems increasingly rely on the employment of heterogeneous sensors to collect data from the manufacturing process, product, and system which can be utilized for different purposes such as the condition monitoring of machines, processes and tools; predictive maintenance; quality control; resource management; etc. To effectively take advantage of these sensors in view of realizing the smart factories of the future, artificial intelligence techniques such as machine learning can be applied.

This special issue particularly welcomes papers from all over the world on the topic of machine learning paradigms in manufacturing systems.

Prof. Dr. Doriana Marilena D'Addona

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
