Deadline for manuscript  
submissions:

**closed (31 January 2023)**

### Message from the Guest Editor

Dear Colleagues,

Research on noise barriers has drastically evolved in the last few years, on the one hand, due to the evolution of numerical methods and, on the other hand, because of the performance increase of the hardware available to researchers.

Adaptations, improvements and combinations of numerical methods have allowed researchers to go one step further, providing faster and better simulations not only of conventional noise barriers but also of more recent proposals such as noise barriers based on metamaterials.

I think it is about time that a scientific journal devoted a Special Issue to compiling these advances as well as new, more or less complex proposals for the prediction of noise barriers, to protect us from the noise caused by transport infrastructures.

an Open Access Journal by MDPI

da Vinci 32, 20133 Milano, Italy

## Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
