Message from the Guest Editors

Dear Colleagues,

This Special Issue focuses on new trends related to grain processing in order to obtain food products based on cereals (wheat, barley, rice, maize, millet, sorghum, etc.), pseudocereals (amaranth, buckwheat, chia, quinoa, etc.), pulses (chickpea, beans, lentils, lupins, soybeans, etc.), and oilseeds (sunflower, flaxseed, hempseed, rapeseed, mustard, etc.). They are of central importance for human nutrition, representing the main source for food products. Given the global population growth and, therefore, the increase for food requirements, more and more studies are needed for finding new grains utilisation, which can ensure a healthy diet. This Special Issue focuses on papers advancing original research and review papers for using different grains type in order to obtain food products. Aspects such as grains composition, their functional and nutritional characteristics, and their use in order to obtain food products may be developed in this Special Issue.

an Open Access Journal by MDPI

Editor-in-Chief

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
