Message from the Guest Editors

Living as mutualists, parasites, pathogens, and saprobes, marine fungi are pivotal to marine food webs because of the recycling of recalcitrant substrata. The importance of marine fungi lies in their ability to produce bioactive compounds that have never been found before. Although the total number of marine fungi has been estimated to exceed 10,000 taxa, most of the fungal diversity has yet to be unveiled. In fact, only 1860 species have been described so far. This Special Issue provides an opportunity to improve the current knowledge of fungal marine biodiversity.

Message from the Editor-in-Chief

As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
