#### Message from the Guest Editor

Dear Colleagues,

Thin-walled structures are widely used in building construction. bridge construction, storage racks. transmission towers, automotive, ships, aircraft, etc. Compared to normal structures, thin-walled structures are easier to make into different types of cross-sections. But this flexibility also leads to complex structural behavior: different buckling modes or even combined failure modes can occur. In recent years, the advances in structural materials, analytical methods and design tools have greatly promoted the development and applications of thin-walled structures in various fields. This Special Issue aims to collect the most recent advances from the global research and development community regarding new theories, experiment, design methods and applications.

**Prof. Dr. Giulio Nicola Cerullo** Dipartimento di Fisica, Politecnico di Milano, Piazza L. da Vinci 32, 20133 Milano, Italy As the world of science becomes ever more specialized, researchers may lose themselves in the deep forest of the ever increasing number of subfields being created. This open access journal Applied Sciences has been started to link these subfields, so researchers can cut through the forest and see the surrounding, or quite distant fields and subfields to help develop his/her own research even further with the aid of this multi-dimensional network.

## **Author Benefits**

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: JCR - Q2 (*Engineering, Multidisciplinary*) / CiteScore - Q1 (*General Engineering*)
