Department of Earth System Sciences, University of California, Irvine, CA 92697, USA

Dr. Fei Zheng

International Center for Climate and Environment Science (ICCES), Institute of Atmospheric Physics, Chinese Academy of Sciences, Beijing 100029, China

Deadline for manuscript submissions: closed (14 July 2023)

Ocean plays a critically important role in climate change. About 93% of the additional heat and 30% of the CO₂ produced by human activity is absorbed by the ocean, which strongly regulates long-term climate variations. The severe impact of climate change on ocean dynamics has broad implications for our society. Understanding ocean dynamics is essential for the exploration of climate change.

This Special Issue aims to promote studies that analyze the connection between climate change and ocean dynamics, and consequently advance understanding of the impact that the ocean will have on future climate change. Potential submission topics include, but are not limited to:

- Changes to the ocean's mixed layer and stratification, and implications for extreme climate variability;
- The impact of large-scale ocean dynamics on future climate change and low-frequency variability in Earth system models.
- The impact of river flows, flooding, and variable land-based precipitation on ocean salinity and circulation;
- The impact of atmospheric changes and shifts in wind patterns on the frequency and intensity of coastal storm systems and upwelling;
- Drivers of drastic changes in polar areas.

Editor-in-Chief

Prof. Dr. Ilias Kavouras

Environmental, Occupational, and Geospatial Health Sciences, CUNY School of Public Health, New York, NY 10027, USA

Message from the Editor-in-Chief

Continued developments in instrumentation and modeling have driven atmospheric science to become increasingly more complex with a deeper understanding of concepts, mechanisms, and interactions. This is the field that innovation built and it has led to a better appreciation for the complexity with atmosphere. Human life is intertwined in this complexity as we strive to better understand our atmosphere. Climate change is constantly stretching the limits of our thinking and forcing new ideas and concepts to be played out. Welcome to the Anthropocene!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, Inspec, CAPlus / SciFinder, Astrophysics Data System, and other databases. **Journal Rank:** CiteScore - Q2 (*Environmental Science (miscellaneous)*)
