Advances in Fuzzy MCDM, Hybrid Methods, Fuzzy Number Ranking and Their Applications

Guest Editors:

Prof. Dr. Ta-Chung Chu
Department of Industrial Management and Information, Southern Taiwan University of Science and Technology, Tainan City 710301, Taiwan

Prof. Dr. Wei-Chang Yeh
Department of Industrial Engineering and Engineering Management, National Tsing Hua University, Hsinchu, Taiwan

Deadline for manuscript submissions:
30 October 2024

Message from the Guest Editors

Dear Colleagues,

Fuzzy multiple criteria decision making (MCDM) and multiple attribute decision making (MADM), which are usually used interchangeably in the literature, are useful tools for modelling and resolving complex decision-making problems with imprecise and ambiguous data in an uncertain environment. The guest editor would like to provide a platform to present the latest advances in the aspects of fuzzy MCDM techniques, hybrid methods, computing of words, aggregating of fuzzy numbers, fuzzy number ranking, and their various applications. The goal is to help to foster the development and practice of fuzzy MCDM techniques to resolve management, business, engineering, or societal problems in an uncertain environment. Any theoretical, empirical, and experimental works related to the above (or other relevant) topics associated with solution methods and/or applications are welcome.

We hope that this initiative will be attractive to researchers specialized in the above-mentioned topics. Contributions may be submitted on a continuous basis before the deadline. After a peer-review process, submissions will be selected for publication based on their quality and relevance.
