Message from the Guest Editor

As is known, artificial intelligence, robotics and biotechnology have been transforming the current business world, and there will be fundamental changes in the way we live, work and communicate in the future. Right now, the digital financial services brought about by information technology enhance the traditional financial services, such as various methods of digital payment, accommodation and investment services. It is clear that the future development of emerging technology and financial service strategy (financial technology, FinTech) has become increasingly diversified, which will further affect the development of financial services. In this Special Issue, we will collect the papers related to the patterns, algorithms, and applications of artificial intelligence in financial services.
