Message from the Guest Editor

Dear colleagues,

The study of time series is dealt with a wide variety of subjects, including statistics, mathematics, physics, and econometrics; both from a theoretical and an applied viewpoint. The domains of application of time series analysis are a large number as well, spanning from social sciences, economics, finance to medicine, biology, climate, information science.

This Special Issue aims to bring together contributions concerning time series analyses from a wide variety of study fields and applicative domains. This Special Issue seeks studies on novel methodologies or applications in both univariate and multivariate time series and stochastic processes. In particular, the Special Issue welcomes submissions concerning time series from the following areas, or in between the areas of:

Economics

Finance

Social Sciences

Meteorology and Climate Science

Biology

Engineering
