National School of Higher Studies (ENES), Universidad Nacional Autónoma de México (UNAM), Morelia 58190, Mexico

Deadline for manuscript submissions:

closed (20 April 2023)

Message from the Guest Editors

We invite you to submit your recent and novel work in this Special Issue of *Axioms*. The main aim is to showcase recent advances in the modeling and analysis of chaotic systems and their applications using fractional calculus. Through high-quality research, we want to show the advantages of using fractional calculus to chaotic systems applied to tasks, including but not limited to:

- Modeling;
- Synchronization;
- Control;
- Chaos;
- Fractals.

In general, fractional-order differential equations provide what is known as intrinsic memory. Based on this premise, we would like to show the effects of such properties on chaotic systems.

This Special Issue is also open to receiving ideas beyond the topics mentioned above. We look forward to receiving your submissions to this Special Issue.
