Message from the Guest Editor

New cheaper, safer, and more sustainable battery materials and technology concepts are urgently required for the decarbonization of the energy system and an extensive market penetration of electric vehicles and stationary storage systems. So-called post-lithium batteries based on, e.g., Na or Mg ions, which no longer rely on Li are promising alternatives that offer a huge potential. Therefore, characterization of electrochemical, thermal, and safety properties of the cells and their individual active and passive materials is required to obtain quantitative and reliable data, which are necessary to improve the current understanding in order to design and develop better materials and cells. This Special Issue addresses all techniques, which are necessary for a holistic assessment from materials to cell level. I warmly invite you to publish your original research paper or a review paper in this Special Issue...

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Take the opportunity to publish your original scientific work or a review paper concerning battery materials, battery technology or battery application within this new open access journal. Along with material science, the journal also addresses engineering and multidisciplinary research topics, such as cell and system design or storage system integration. Publishing proffers visibility for the benefit of other experts and facilitates discussion of the research results within the field. You are invited to publish your work, read published papers and to participate in topical discussions.

Author Benefits

Open Access:— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [Ei Compendex](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Electrochemistry*) / CiteScore - Q2 (*Electrochemistry*)
