submissions:

30 June 2024

Message from the Guest Editor

Dear Colleagues,

With the advent of precision medicine where the patient treatments are selected based on the genetic understanding of their disease, it is important to know the relationship between genes beforehand. Gene pathways and gene regulatory networks have been constructed to describe the relationship between genes based on biological experiments, but their construction is still ongoing, and lots of genes are still to be studied to fully understand it. To address this issue, gene clustering has been used to group correlated genes together based on their expression level. Most existing literature clusters genes based on one type of omics data, ignoring useful information that can come from the other types. To achieve a better clustering structure, using omics data rather than using one type of omics data for clustering is desirable. This Special Issue tackles this important research question.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Bioengineering* (ISSN 2306-5354). *Bioengineering* is published in open access format – research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. *Bioengineering* provides an advanced forum for the science and technology of bioengineering. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [PMC](#), [CAPlus / SciFinder](#), [Inspec](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Engineering, Biomedical*)
