Deadline for manuscript
submissions:

closed (31 December 2022)

Message from the Guest Editor

Inefficient energy use leads to high building energy consumption and massive carbon emissions in the building sector. In this context, the development of building technologies with clean energy and the optimization of building energy utilization strategies, are of great significance to improve building energy efficiency and to reduce the carbon emission from buildings

It has been proved that in building simulation, including or excluding the consideration of occupant behavior may cause significant differences. Therefore, by studying the interaction between occupant behaviors and the building environment will help to reduce the building energy consumption while satisfying the healthy and comfort requirement of occupants.

In this Special Issue, we invite submissions on exploring cutting-edge researches and advanced studies in building energy efficiency and occupant behavior. Both theoretical and experimental studies are welcome, as well as comprehensive review and survey papers.

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (*Architecture*)
