### Message from the Guest Editor

Regulatory T cells (Tregs), an immunosuppressive subset of CD4<sup>+</sup> T cells characterized by the master transcription factor FoxP3, play essential roles in maintaining self-tolerance. This Special Issue is expected to assemble studies analyzing the prognosis value of Tregs, the mechanisms involved in their recruitment and expansion in the tumor environment, their localization and residency, as well as their heterogeneity (transcriptome, phenotype, activation/exhaustion, function, origin (natural/induced)).
