Message from the Guest Editors

The main goal of this Special Issue on “Applications of Microwave-Assisted Synthesis in Catalysis” is to combine a variety of new and original research results in order to highlight the importance of this promising synthetic route. Thus, we invite researchers to disseminate their studies on the application of microwaves for organic transformations, including biomass valorization, hydrogen production, oil refining, as well as catalysts preparation. Studies related to improvements achieved with this method compared to conventional methods, or the scale-up of microwave-assisted reactions, are also welcome.

This Special Issue welcomes contributions on (among other things):

- Microwave-assisted acid/base-catalysed reactions;
- Microwave-assisted metal-catalysed reactions;
- Microwave-assisted oxidation reactions;
- Biomass conversion under microwave irradiation;
- Microwave-assisted gas processing;
- Effects of microwave activation in hydrogenation/dehydrogenation reactions;
- Microwave-assisted reactions in non-polar solvents;
- Environmental catalysis;
- Microwave-assisted synthesis of catalytically active nanomaterials;
- Microwave-stimulated solvent-free reactions
