# **Message from the Collection Editor**

Research over the past years has revealed the increasingly intricate landscape of acute myeloid leukemia (AML) and myeloproliferative neoplasms (MPN). Today it is well-appreciated that the heterogeneity of malignant cells in both diseases is triggered by sets of cytogenetic abnormalities and somatic mutations. Besides this genetic complexity, diversification in the epigenome has also been identified as a key player in both tumors. The multidimensional epigenetic picture integrates several layers of (dys)regulated DNA methylation, histone modification, and microRNA modulation.

Thus, understanding the functional link between genetic and epigenetic heterogeneity in AML and MPN, and what they contribute to the disease is an important area of research that would aid clinical decision-making and enhance drug development.

In this Topical Collection, we will discuss the current trends in epigenetic dysregulation in AML and MPN, their interactions with other cancer mechanisms, the interrelation between epigenetics and genetics, and the research on the development of drugs targeting epigenetic regulators.

## **Editors-in-Chief**

## Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities, 6-145 Jackson Hall, 321 Church St SE, Minneapolis, MN 55455, USA

#### Prof. Dr. Cord Brakebusch

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

# **Message from the Editorial Board**

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. Cells encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
