Medical Sciences for Children
and Adults – University of
Modena and Reggio Emilia,
Modena, Italy

Deadline for manuscript
submissions:

closed (15 May 2021)

Message from the Guest Editors

Dear Colleagues,

Programmed cell death is an evolutionary conserved process characterized by the activation of intrinsic signaling programs that lead to cell self-destruction upon exposure to developmental or environmental stimuli. This cell death program was first identified in plants where it represents a crucial event for development and morphogenesis as well as a defense mechanism against infected or damaged cells. In animals, programmed cell death is involved in organogenesis, tissue remodeling, and homeostasis. Abnormal regulation of this program is associated with a plethora of human disorders, including developmental disorders, immunodeficiency, autoimmune diseases, neurodegeneration, and cancer. Notably, intrinsic resistance of cancer cells to programmed cell death contributes to their “bullet proof” characteristic against several chemotherapeutic drugs. This Special Issue of *Cells* welcomes original articles and reviews covering the broad spectrum of processes in which programmed cell death is involved, both in health and disease.

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation
Centre, The University of
Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (*General Biochemistry, Genetics and Molecular Biology*)
