Message from the Guest Editors

Dear Colleagues,

There is currently global concern regarding the mental and emotional health of youths. Emotional disorders that have early onset come with high lifetime persistence as well as immense personal and societal consequences.

The aim of this Special Issue is to stimulate urgently needed research on the mechanisms and innovative interventions for addressing Depression, Anxiety and Stress in Children and Adolescents. We welcome original research studies (e.g., experimental, randomized controlled trials, mixed methods) and meta-analyses on the topic. It is encouraged that the focus of the research be to either validate innovative assessment systems for youth stress, anxiety and depression; investigate understudied mechanisms and risk factors connected to current world changes and stressors for such conditions; or to evaluate accessible (e.g., digital) interventions aiming to prevent or reduce depression, anxiety and stress in children and adolescents.

We look forward to receiving your contributions.
