Otolaryngology, Audiology and  
Phoniatrics, Medical University of  
Lublin, Lublin, Poland

Deadline for manuscript  
submissions:

**closed (25 May 2022)**

### Message from the Guest Editor

We are pleased to introduce this Special Issue regarding pediatric audiology, otology and rhinology. Deaf children should be carefully monitored regarding accurate diagnosis and early treatment. Hearing loss may be inherited or acquired. Conductive hearing impairment is commonly observed in the course of otitis media with effusion. Psychological assessment brings us closer to understanding intelligence processes, the functional organization of the brain and central auditory processing in children struggling with hearing problems, which may contribute to speech disorders in this group of patients. Diagnostic and treatment algorithms should be widely known and recommended. Elastography is a recent ultrasonography method, which could be commonly used in cervical lymphadenopathy diagnostics in children. Nowadays, COVID-19-related findings are closely followed, and we would like to present our observations concerning ENT emergency visits.
