Message from the Guest Editor

Dear Colleagues,

Dental diseases are very common in children. They range from caries to malocclusion to include very rare and complex diseases of multidisciplinary interest. The purpose of this Special Issue is to describe and update the therapies of pediatric dental diseases with the most recent research, also including rare dental diseases that require early diagnosis, and systemic diseases with their manifestations in the oral cavity. The prevention that can be carried out on pediatric dental patients is also of great interest. Experimental studies, literature reviews, and case reports are accepted.
