### Message from the Guest Editors

This Special Issue focuses on the critical roles that parents and peers play in the socialization process during childhood and adolescence, such as the following topics. First, some works may explore whether parenting or parent–child relationships predict peer relationships. Other papers may investigate transactional or reciprocal links between parenting and peer relationships. A third possible topic may center on whether parents and peers serve as unique predictors of child and adolescent adjustment when examined simultaneously. Finally, moderating effects may be another research goal of submitted manuscripts. Proposed conceptual models will be particularly welcome.

Deadline for manuscript  
submissions:

**closed (31 January 2021)**
